

# TRAKWEAR

Specialized software for the  
*Footwear and Apparel*  
I N D U S T R I E S

Shoe and apparel distributors, wholesalers and manufacturers like yourself constantly struggle with an unending realm of business challenges. Seasonal swings, fashion fads, changing consumer interests and an overwhelming spectrum of sizes, colors and styles are daily issues. Buy the wrong merchandise and you end up with expensive, excessive inventory, dissatisfied customers and lost sales.

The trouble is, software products available today tend to be generic and don't face these industry-specific challenges head-on. You wouldn't want to wear clothing or shoes that were too small, so why would you squeeze your business information into computer software sized for another industry? You've probably never had any other option.

TrakWear for Macola gives you an option. Our enhancement software, which is attached to a full-spectrum suite of business information modules, is specifically designed for footwear and apparel distributors, wholesalers and manufacturers.

TrakWear seamlessly manages your business, from manufacturing, to general ledger. Checking availability and monitoring work-in-progress has never been simpler. Indispensable features include:

- Point-and-click operations
- Drill-down feature
- Flexibility to modify screens per user to only display needed fields, substantially reducing data entry time
- Barcoding
- EDI Integration
- E-Commerce capability

Since 1988, South Coast Computers, Inc. has developed custom software solutions for the footwear and apparel industries. We have over a decade of experience in wholesale distribution, making us uniquely qualified to tackle the issues facing the industry.

Macola Software has been in business for over 30 years and delivers Microsoft-based solutions to growth-oriented small and midsize companies.

TrakWear is attached to their signature product, a client/server or stand-alone application that takes full advantage of the Windows 95/98, ME, 2000, and XP Microsoft SQL Server environments.

# TRAKWEARS MODULES

Trakwear's modules all interlock for smooth transfer of information from one business function to another. Data entry in one function instantly updates all other modules. Being modular enables you to purchase only what you need, allowing you the flexibility to add modules as you grow.
